

Looking to extend the lifespan of your machine tools without adding new conveyors and tanks on each machine tool on your shop floor?

Our Portable Sludge Sucker is the answer. It can clean and filter the coolant on multiple machine tools on your shop floor without the expensive investment of all new filtration systems for each machine.

FILTRATION LEVEL / TECH SPECS

- 5-10 microns filtration with cyclonic filtration system
- Screen at inlet hose to ensure larger chips do not migrate into the PSS system
- Magnet on inlet hose to position in multiple locations of dirty tank
- Exit/clean hose to be located on opposite side of inlet to cycle coolant throughout system
- Pressure gauge to ensure system is working properly

APPLICATIONS

- Systems that accumulate 500 micron or smaller particulates
- Normally medium and high-level filtrated conveyor systems
- End User/Distributor/OEM that is looking for longer spans of machine service

FEATURES & BENEFITS

- 120V power
- Easy to clean out sludge pot
- 2-4 days to clean a system and can be moved to the next machine
- Minimal service and can be used with multiple machines
