TOMBSTONES, CUSTOM FIXTURES, & WORKHOLDING COMPONENTS
AMERICAN WORKHOLDING WISDOM

The background of the entire page is a grayscale photograph of industrial machinery, likely a CNC mill or lathe, with various metal components, bolts, and structural elements visible. The image is slightly blurred, emphasizing the text in the foreground.

BUILD ON THE ROCK

WWW.AMROK.COM

Every manufacturer requires repeatable, precise, and productive workholding solutions that offer simplified, versatile designs. In fact, it was that exact need that encouraged our founders to create what is now known as the AMROK division, located in the heart of one of America's largest manufacturing hubs—Rockford, Illinois.

A BRIEF HISTORY

In the 1960's, we found ourselves utilizing our internal engineering teams to design improved and custom fixturing solutions due to the lacking designs of what was being offered in the industry. Over the years, shop managers watched the innovative designs of our engineers transform milling departments throughout the company into some of the most lean, efficient, and successful departments throughout the entire company. By the early 2000's there was such an immense improvement that it was obvious what needed to happen—the AMROK division was born.

Now, over 15 years after AMROK was established, it has become our mission to share generations of workholding wisdom with manufacturers throughout North America by working closely with companies, whether they are industrial giants or small job shops. Our workholding and custom fixturing teams continue to gather knowledge by learning about and witnessing your manufacturing challenges first-hand. It is through these personal relationships that we are able to help you discover optimized solutions while improving your bottom line.

ALVIN GOELLNER
NATIONAL PRODUCT SALES MANAGER
Advanced Machine and Engineering—
AMROK Division

Alvin Goellner

ADVANCED MANUFACTURING

"My entire life I have been involved in Advanced Machine and Engineering—that is just what happens when you are born into a tightly-knit, family-owned business. My career here started when I was young, running various machines—manual lathes, mills, and CNC mills and horizontals, and high-precision machines—working my way up to my current position as National Product Sales Manager for the AMROK division of AME.

The experiences I have had working with customers around the world have been incredible—it has been an extremely rewarding experience developing improved and optimized solutions for various workholding challenges over the years. Visiting past customers and seeing the success they have experienced with new setups is part of what keeps us motivated at AMROK to keep developing and growing our workholding wisdom."

WORKHOLDING WISDOM

AMROK has evolved over years of **innovation, growth, and continuous improvement**. Our partnerships with some of the brightest minds in workholding allow us to deliver the products, systems, and know-how that will optimize your setup and simplify your processes.

We know there are countless ways to hold a part during the machining process, so our **workholding and custom fixturing experts** work closely with you to understand your manufacturing challenges **first-hand**. It is through these personal relationships that we are able to find the right solution for your application while also improving your bottom line.

The success of your end product relies on a robust foundation—make it stronger with AMROK.

WORKHOLDING WISDOM

As part of our mission, we developed an educational blog that offers tools, tips, and tactics for the workholding and fixturing communities at www.workholdingwisdom.com. Workholding Wisdom is designed for new machinists, seasoned engineers, c-suite executives, and everyone in between.

Want to join our expert panel as a contributing author? Contact Nick Goellner—Marketing Director at contact@workholdingwisdom.com for more information.

FOUNDATION**

BUILD ON THE ROCK

THE LEADER IN TURN-KEY WORKHOLDING SOLUTIONS

Advanced Machine and Engineering designs and manufactures standard and custom tombstones and sub-plates for virtually any workholding application. By holding the **industry's tightest tolerances** for flatness, parallelism, perpendicularity, surface finish, and hole location, we have developed a highly-regarded reputation for being a leader in the workholding industry.

BACKED BY PRECISION

We offer a **fully operational manufacturing facility** equipped with milling, boring, turning, EDM, OD and ID grinding, and two of Hexagon's DEA large-format CMM's to support our commitment to our high-precision standards.

Reference our full equipment list on page 224.

WORLDLY EXPERTISE

Our workholding solutions have been developed with **generations** of experience and engineers from **around the world**, leveraging a practical understanding of the machining environment to design and build fixtures that meet the demands of the industry.

TOMBSTONES MADE TO ORDER

MATERIAL OF YOUR CHOICE

AMROK tombstones are available in a variety of materials, including cast iron, aluminum, steel, and AMROK's **NEW** epoxy mineral.

INDUSTRY STANDARD

The support of **industry** standard 2.0000" grid spacing utilizes hardened, threaded inserts and bushings for long-term durability.

CUSTOMIZABILITY

Customize your tombstone to optimize a specific application with custom hole patterns, t-slots, or other locating/fastening systems—or start with a plain-faced tombstone. Special sizes are also available upon request.

TOMBSTONE SUB-PLATES

- Industry standard 2" grid pattern provides flexibility in fixturing setups
- Offered as plain-face, or ½"-13 or ⅝"-11 grid systems offering hardened, threaded inserts and precision bushings
- Manufactured to a higher standard of quality with best-in-class precision tolerancing—see full table of precision tolerancing standards (*page 8*)
- Hardened, threaded inserts allow for clamping in every hole while offering quick and easy replaceability
- Hardened, precision bushings are accurately located to ensure easy locating coupled with high wear resistance

ADDITIONAL OPTIONS AVAILABLE

- Custom sizes to accommodate specific applications
- Custom hole patterns, metric hole sizes, t-slots, or any other locating/fastening systems
- Replacement bushings and insert kits with an extraction tool upon request (*page 169*)

Note: CAD models available for download online.

Note: Geometric tolerances shown are precision. Please specify aluminum or steel when ordering. For full tolerancing and precision table, reference page 8.

TOMBSTONE[®] CUBE, CAST IRON

- Industry standard 2" grid pattern provides flexibility in fixturing setups
- Offered as plain-face, or ½"-13 or ⅝"-11 grid systems offering hardened, threaded inserts and precision bushings
- Manufactured to a higher standard of quality with best-in-class precision tolerancing—see full table of precision tolerancing standards (*page 8*)
- Standard face widths up to 25" and heights up to 40"—custom sizes available
- Hardened, threaded inserts allow for clamping in every hole while offering quick and easy replaceability
- Hardened, precision bushings are accurately located to ensure easy locating coupled with high wear resistance
- Also available in Epoxy mineral (*page 48*)

Note: CAD models available for download online.

ADDITIONAL OPTIONS AVAILABLE

- Custom column sizes to accommodate specific applications
- Custom hole patterns, metric hole sizes, t-slots, or any other locating/fastening systems
- Replacement bushings and insert kits with an extraction tool upon request (*page 169*)

Note: Geometric tolerances shown are precision. For full tolerancing and precision table, reference page 8.

TOMBSTONE CROSS, CAST IRON

- Industry standard 2" grid pattern provides flexibility in fixturing setups
- Offered as plain-face, or ½"-13 or ⅝"-11 grid systems offering hardened, threaded inserts and precision bushings
- Manufactured to a higher standard of quality with best-in-class precision tolerancing—see full table of precision tolerancing standards (*page 8*)
- Standard face widths up to 10" and heights up to 40"—custom sizes available
- Hardened, threaded inserts allow for clamping in every hole while offering quick and easy replaceability
- Hardened, precision bushings are accurately located to ensure easy locating coupled with high wear resistance
- Also available in Epoxy mineral (*page 52*)

Note: CAD models available for download online.

ADDITIONAL OPTIONS AVAILABLE

- Custom column sizes to accommodate specific applications
- Custom hole patterns, metric hole sizes, t-slots, or any other locating/fastening systems
- Replacement bushings and insert kits with an extraction tool upon request (*page 169*)

Note: Geometric tolerances shown are precision. For full tolerancing and precision table, reference page 8.

PRACTICAL SOLUTIONS

TOMBSTONE DOUBLE ANGLE, CAST IRON

- Industry standard 2" grid pattern provides flexibility in fixturing setups
- Offered as plain-face, or ½"-13 or ⅝"-11 grid systems offering hardened, threaded inserts and precision bushings
- Manufactured to a higher standard of quality with best-in-class precision tolerancing—see full table of precision tolerancing standards (*page 8*)
- Standard face widths up to 39.37" and heights up to 50"—custom sizes available
- Hardened, threaded inserts allow for clamping in every hole while offering quick and easy replaceability
- Hardened, precision bushings are accurately located to ensure easy locating coupled with high wear resistance
- Also available in Epoxy mineral (*page 56*)

Note: CAD models available for download online.

ADDITIONAL OPTIONS AVAILABLE

- Custom column sizes to accommodate specific applications
- Custom hole patterns, metric hole sizes, t-slots, or any other locating/fastening systems
- Replacement bushings and insert kits with an extraction tool upon request (*page 169*)

OPTIONS WHEN YOU NEED THEM

TOMBSTONE WINDOW FRAME

- Plain-faced, precision-machined faces
- ½"-13 mounting holes on each corner with hardened, threaded inserts and bushings for precision positioning, easy locating, high wear resistance, and easy replaceability
- Includes two blank fixture plates (*page 28*) mounted to either side of the window frame
- Standard face widths up to 31.5" and heights up to 40"—custom sizes available

ADDITIONAL OPTIONS AVAILABLE

- Custom designed fixture plates
- Custom and metric hole sizes and patterns
- Replacement bushings and insert kits with an extraction tool upon request (*page 169*)

Note: CAD models available for download online.

TOMBSTONE

FIXTURE PLATES FOR WINDOW FRAMES

- Mountable on any 2" grid pattern horizontally or vertically for quick-change dedicated machining
- ½"-13 mounting holes on each corner with hardened, threaded inserts and bushings for precision positioning, easy locating, high wear resistance, and easy replaceability
- Locate by using any two of the four mounting holes with precision locating screws (*page 166*)
- Standard face up to 31x37"—custom sizes available
- Compatible with tombstones and sub-plates

ADDITIONAL OPTIONS AVAILABLE

- Aluminum and cast iron sizes available
- Custom designed fixture plates
- Custom and metric hole sizes and patterns
- Replacement bushings and insert kits with an extraction tool upon request (*page 169*)

Note: CAD models available for download online.

Note: Geometric tolerances shown are precision. For full tolerancing and precision table, reference page 8.

TOMBSTONE SINGLE ANGLE

- Industry standard 2" grid pattern provides flexibility in fixturing setups
- Offered as plain-face, or ½"-13 or ⅝"-11 grid systems offering hardened, threaded inserts, and precision bushings
- Manufactured to a higher standard of quality with best-in-class precision tolerancing—see full table of precision tolerancing standards (*page 8*)
- Standard face widths up to 32" and heights up to 48"—custom sizes available
- Available in two versions: Version I offers diagonal hole positioning, Version II offers coaxial hole positioning
- Hardened, threaded inserts allow for clamping in every hole while offering quick and easy replaceability
- Hardened, precision bushings are accurately located to ensure easy locating coupled with high wear resistance

Note: CAD models available for download online.

ADDITIONAL OPTIONS AVAILABLE

- Custom column sizes to accommodate specific applications
- Custom hole patterns, metric hole sizes, t-slots, or any other locating/fastening systems
- Replacement bushings and insert kits with an extraction tool upon request (*page 169*)

Note: Geometric tolerances shown are precision. For full tolerancing and precision table, reference page 8.

TOMBSTONE_Y

- Industry standard 2" grid pattern provides flexibility in fixturing setups
- Offered as plain-face, or ½"-13 or ⅝"-11 grid systems offering hardened, threaded inserts and precision bushings
- Manufactured to a higher standard of quality with best-in-class precision tolerancing—see full table of precision tolerancing standards (*page 8*)
- Standard face widths up to 8" and heights up to 30"—custom sizes available
- Hardened, threaded inserts allow for clamping in every hole while offering quick and easy replaceability
- Hardened, precision bushings are accurately located to ensure easy locating coupled with high wear resistance

Note: CAD models available for download online.

ADDITIONAL OPTIONS AVAILABLE

- Custom column sizes to accommodate specific applications
- Custom hole patterns, metric hole sizes, t-slots, or any other locating/fastening systems
- Replacement bushings and insert kits with an extraction tool upon request (*page 169*)

RISER

- Designed to raise workpiece off worktable for four-sided machining
- Standard design is without a grid pattern (plain-face)
- Manufactured to a higher standard of quality with best-in-class precision tolerancing—see full table of precision tolerancing standards (page 8)
- Standard face widths up to 12"—custom sizes available
- Hardened, threaded inserts allow for clamping in every hole while offering quick and easy replaceability
- Hardened, precision bushings are accurately located to ensure easy locating coupled with high wear resistance

ADDITIONAL OPTIONS AVAILABLE

- Custom sizes to accommodate specific applications
- Industry standard 2" grid, custom hole patterns, metric hole sizes, t-slots, or any other locating/fastening systems
- Replacement bushings and insert kits with an extraction tool upon request (page 169)

Note: CAD models available for download online.

EPOXY MINERAL TOMBSTONES

AMROK's Epoxy mineral tombstone, a TRIAG® product, offers an **alternative to aluminum, steel, and cast iron** tombstones for projects requiring higher throughput and increased capacity. Epoxy is a lightweight material that:

- Reduces the overall weight on the machine pallet used for larger work pieces or high-density machining applications
- Lowers thermal conductivity and provides **consistent precision machining** of workpieces
- Offers **100 times better vibration damping** capabilities in comparison to aluminum and 10 times better than cast iron
- Features low tensile and impact strength, which assures **spindle head safety** in unexpected crash scenarios

TRIAG

<https://www.triag-int.ch/en/>

TOMBSTONE^{CUBE}, EPOXY MINERAL

- Industry standard 2" grid pattern provides flexibility in fixturing setups
- Offered in ½"-13 and ⅝"-11; also available without a grid (plain-face)
- Manufactured to a higher standard of quality with best-in-class precision tolerancing—see full table of precision tolerancing standards (*page 8*)
- Standard face widths up to 16.00" and heights up to 39.50"—custom sizes available
- Hardened, precision bushings are tapped and accurately located to ensure easy locating coupled with high wear resistance
- Also available in cast iron (*page 14*)

ADDITIONAL OPTIONS AVAILABLE

- **COMING SOON:** Aluminum base plates integrated with epoxy mineral can be provided upon request
- Custom column sizes to accommodate specific applications
- Custom hole patterns, metric hole sizes, or any other locating/fastening systems
- Replacement bushings available upon request (*page 168*)

Note: CAD models available for download online.

TOMBSTONE CROSS, EPOXY MINERAL

- Industry standard 2" grid pattern provides flexibility in fixturing setups
- Offered in ½"-13 and ⅝"-11; also available without a grid (plain-face)
- Manufactured to a higher standard of quality with best-in-class precision tolerancing—see full table of precision tolerancing standards (*page 8*)
- Standard face widths up to 9.15" with up to 16.00" between parallel faces; heights up to 39.50"—custom sizes available
- Hardened, precision bushings are tapped and accurately located to ensure easy locating coupled with high wear resistance
- Also available in cast iron (*page 18*)

Note: CAD models available for download online.

ADDITIONAL OPTIONS AVAILABLE

- **COMING SOON:** Aluminum base plates integrated with epoxy mineral can be provided upon request
- Custom column sizes to accommodate specific applications
- Custom hole patterns, metric hole sizes, or any other locating/fastening systems
- Replacement bushings available upon request (*page 168*)

DOUBLE ANGLE TOMBSTONE EPOXY MINERAL

- Industry standard 2" grid pattern provides flexibility in fixturing setups
- Offered in ½"-13 and ⅝"-11; also available without a grid (plain-face)
- Manufactured to a higher standard of quality with best-in-class precision tolerancing—see full table of precision tolerancing standards (*page 8*)
- Standard face widths up to 31.00" with up to 16.00" depths; heights up to 39.50"—custom sizes available
- Hardened, threaded inserts allow for clamping in every hole while offering quick and easy replaceability
- Hardened, precision bushings are tapped and accurately located to ensure easy locating coupled with high wear resistance
- Also available in cast iron (*page 22*)

Note: CAD models available for download online.

ADDITIONAL OPTIONS AVAILABLE

- **COMING SOON:** Aluminum base plates integrated with epoxy mineral can be provided upon request
- Custom column sizes to accommodate specific applications
- Custom hole patterns, metric hole sizes, or any other locating/fastening systems
- Replacement bushings available upon request (*page 168*)

WORKHOLDING SYSTEMS

Advanced Machine and Engineering is home to some of the highest-quality **turn-key solutions** in the industry. Here are some of our highlighted products:

- **Patented** centering dovetail vise for aggressive 5-axis machining (*page 68*)
- Heavy-duty modular vise systems for versatile setups on precision grids holding the tightest tolerances in the industry—for full tolerancing and precision table, reference page 8
- Integrated self-aligning fixture elements providing safe and accurate machining solutions for irregular-shaped workpieces
- An exclusive partnership with **Triag International**—an international leader in modular workholding solutions (*page 88*)

CENTERING DOVETAIL VISE (CDV)

STANDARDIZATION

- Parts are all prepped, clamped, and located the same way, each time
- Manufacturing operations are able to be streamlined
- Fits on industry standard, 2" grids using precision locating screws included in each assembly
- Grid system allows for between-center, on-center, Bridgeport, and t-slot mounting with no additional sub-plate or tombstone mounting

COST SAVINGS

- More parts can be machined off-line at a reduced manufacturing cost
- Multiple parts can be held by the same unit, increasing production capabilities
- Allows for minimal excess stock for clamping and locating parts, reducing scrap costs
- No additional components are required for functionality

TIME SAVINGS

- No change-over or additional components required for clamping and locating
- Design allows for five-sided machining of parts
- Multiple parts can be machined on a single unit, allowing machinists to run multiple machines simultaneously

HIGH TORQUE/HEAVY LOADS

- Various jaw width and height options provide better load distribution and workpiece clamping

Note: CAD models available for download online.

EASE OF USE

- Parts are always clamped and located the same way
- Simple design allows for fast and easy loading and unloading, and requires virtually no training
- Jaw assemblies can be added and removed quickly for versatility and flexibility
- Maintenance is streamlined with simplified disassembly

SCRAP REDUCTION

- Eliminates distortion in machined parts caused by clamping forces
- Securely holds parts so they do not become loose during machining
- Precision mounting lowers scrap production costs

Parts Included in Assembly		
Quantity	Part Description	Part Number
2	Threaded Locating Pins	CDV-LOCPIN-1 or CDV-LOCPIN-2
2	Precision Locating Screws	AMF-87996
Varies	Socket Head Cap Screws for Mounting	SHCS ½"-13 x 2.75 Long

CENTERING DOVETAIL VISE JAW ASSEMBLY

All jaw types are interchangeable for any Centering Dovetail Vise (CDV). They can be used together on the same base as long as the dovetail is prepped for the tallest jaw you plan to use on the CDV.

Note: Jaws are hardened to 40-45 Rc.

Dimensions			Dovetail Width	Part Number

C'bored Hole Plug

Locating Pin

Description	Details	Part Number
Precision Locating Screw	For locating on center	AMF-87543
Precision Locating Screw	For locating 1" off-center	AMF-87996
Socket Head Cap Screw	½"-13 x 2.75" Long - For 3" Wide Vise	-
Socket Head Cap Screw	½"-13 x 6.00" Long - For 6" Wide Vise	-
Hole Plug	-	AMF-87944
C'Bored Hole Plug	-	AMF-59815
Locating Pin	ø.4999 / .125"	CDV-LOCPIN-1
Locating Pin	ø.4999 / .250"	CDV-LOCPIN-2

Note: Locating screws and fasteners for mounting to standard gridplates and/or tombstones are included.

DOVETAIL VISE

- Exposes up to five faces for open and efficient machining
- Quick and easy precision location setups enabled by two precision bushing holes and two precision locating screws (*page 166*)
- Reduced scrap costs
- Mounting for a 2" grid system uses standard ½"-13 SHCS
- Designed to hold pre-machined parts at a 15° angle

ADDITIONAL OPTIONS AVAILABLE

- Metric system units available upon request

FIXED VISES

- Black oxide finish provides corrosion resistance and extended life
- Quick and easy precision location setups enabled by a set of six precision bushing holes
- Can also be used as a precision stop from two sides when used with smooth jaws
- Pairs with movable vises (*page 81*)
- Smooth or serrated jaw styles available to meet different requirements
- Accommodates ½"-13 or ⅝"-11 grid systems
- For a full list of vise accessories and replacement parts, reference *page 86*

Note: A minimum plate thickness of ⅝" is required for face milling applications when using a taller parallels.

Dimensions	System	Jaw Style	Part Number	Mating Locating Screw Part Number (Not Included)

in	UNC			
4.10	½"-13	Serrated	AMF-59547-01	AMF-87994
4.10	½"-13	Smooth	AMF-59547-02	AMF-87994
4.10	⅝"-11	Serrated	AMF-59547-03	AMF-87883
4.10	⅝"-11	Smooth	AMF-59547-04	AMF-87883

*Note: The height may be raised to 4.350"±.001 when using parallel AMF-59547-01-D4 (*page 86*). Two precision dowel screws are used to locate vice on grids.*

MOVABLE VISES

- Black oxide finish provides corrosion resistance and extended life
- Quick and easy precision location setups enabled by a set of six precision bushing holes
- Can also be used as a precision stop from two sides when used with smooth jaws
- Pairs with fixed vises (*page 80*)
- Smooth or serrated jaw styles available to meet different requirements
- Accommodates ½"-13 or ⅝"-11 grid systems
- For a full list of vise accessories and replacement parts, reference *page 86*

Note: A minimum plate thickness of ⅝" is required for face milling applications when using a taller parallels.

4.10	⅝"-11	Smooth	AMF-59546-04	AMF-87883

*Note: The height may be raised to 4.350"±.001 when using parallel AMF-59546-01-D4 (*page 86*). Two precision dowel screws are used to locate vice on grid.*

- Black oxide finish provides corrosion resistance and extended life
- Quick and easy precision location setups enabled by a set of four precision bushing holes and two precision locating screws (page 166)
- Addresses spindle clearance problems for horizontal mills with a low profile 5" support height
- The fixed jaw can be adjusted up to 1" in cases requiring a change in spacing between the jaw and grid
- Smooth or serrated jaw styles available, with clamping widths between 0.50" to 4.60," to meet different requirements
- For a full list of vise accessories and replacement parts, reference page 86

Note: A minimum plate thickness of 5/16" is required for face milling applications when using a taller parallels.

Profile	Jaw Style	System	Part Number
		UNC	
Low Profile	Serrated	½"-13	AMF-55953-01
Low Profile	Smooth	½"-13	AMF-55953-02

- Black oxide finish provides corrosion resistance and extended life
- Quick and easy precision location setups enabled by a set of four precision bushing holes and two precision locating screws (page 166)
- Addresses spindle clearance problems for horizontal mills with a 7" support height
- The fixed jaw can be adjusted up to 1" in cases requiring a change in spacing between the jaw and grid
- Smooth or serrated jaw styles available, with clamping widths between 0.50" to 4.60," to meet different requirements
- For a full list of vise accessories and replacement parts, reference page 86

Note: A minimum plate thickness of 5/16" is required for face milling applications when using a taller parallels.

Standard	Serrated	1/2"-13	AMF-59552-01
Standard	Smooth	1/2"-13	AMF-59552-02

TOE CLAMP

- Exposes more of the workpiece for open and efficient machining
- Addresses spindle clearance problems with low-profile design
- Black oxide finish on body of clamp provides corrosion resistance and extended life
- Gripper available in smooth brass or serrated steel on the front face of the jaws
- 1000 pounds of downward clamping force
- Adjustable clamp head with 3° taper prevents back-off

Note: Minimum part thickness of ¼" is required.

SOLUTIONS**

TRIAG INTERNATIONAL

80% of all machines are not used to their full potential—
the solution: Triag modular clamping systems

- Flexibility of modular workholding becomes more efficient by adapting to the workholding system to each situation
- High density workholding improves production capabilities

Advantages of using a modular workholding system:

- Utilizes full workspace of the machine with capabilities supporting high-density as well as small and large parts
- Compatible with different machines including vertical, horizontal, and 5-axis
- Fast and easy changeover between jobs
- Flexibility in the form of a variety of compatible components, improving equipment costs
- Enables lights-out production cycles
- Competitive prices as compared to standard vises
- Off-the-shelf replacement parts are readily available

FULL POTENTIAL WORKHOLDING

- Efficient changeover between jobs
- Adaptable, modular workholding for abnormally shaped workpieces
- Lights-out manufacturing
- Maximized machining space for improved production capabilities

TRADITIONAL WORKHOLDING

- Expensive, custom fixturing that only clamps a single, specific workpiece
- Low production capabilities; no possibility for lights-out manufacturing
- Machinist has significant hands-on operating time for changeovers

TRIAG INTERNATIONAL

ONE SYSTEM FOR ALL APPLICATIONS

Consistent foundations allow for various types of setups to be less costly, easier to use, and more efficient to change over between machining cycles.

Collet chuck ER32 in operation.

A mixed setup to maximize work area.

Large part clamping.

Eight parts being machined on three faces in one operation.

TRIAG INTERNATIONAL

A traditional vise or dedicated fixture may serve the purpose of machining a specific workpiece, however the modular vise provides a combination of high flexibility and high density workholding for the same result.

Traditional Vise

Modular Vise

POWERCLAMP MODULAR WORKHOLDING SYSTEM

- Patented clamping system provides a 3-step, simplified process, improving efficiency over the competition
- Clamp single or multiple workpieces
- Combines the advantages of traditional vises with the features of an advanced modular system
- Adapts to difficult-to-clamp parts

Loosen Bolt

Lift and Change Position

Fasten Bolt

POWERCLAMP BASE RAILS *on 2" spacing with ½" precision bores*

- Wide range of lengths and widths to fit any application
- More than 100 standard clamping modules are compatible
- Clamping forces up to 15daN (15t)
- Precision serration with 2mm pitch allows fast and accurate clamping

TRIAG INTERNATIONAL

STRESS-FREE CLAMPING

- Simplified for optimal setup time with high-precision, stress-free clamping and locating
- Minimized real estate of clamping assembly systems
- Ideal for smaller spaces due to compact height; also available as a threaded option to integrate into standard clamping components
- Swiveling ball element contact pads allow for less internal stresses for bent or unconventionally angled workpieces; ball elements swivel up to 10°
- Viton O-Rings protection, preventing penetration of chips and coolant within the ball element system
- Smooth or serrated ball element contact pads available to meet different requirements
- Accommodates ½"-13 or ⅝"-11 grid systems

The ball element enclosed in the SAFE system components can swivel between 6° and 10°.

Viton O-Ring protects the ball element by preventing penetration of chips and coolant within the ball element system.

Ball elements accessories are available to thread into clamping bars and other clamping components.

CONVENTIONAL METHOD

Unclamped

Clamped

The workpiece being clamped is distorted by the clamping system, putting tension on the workpiece while creating inaccuracies in the machining process.

NEW METHOD

Unclamped

Clamped

The clamping system being used to clamp the workpiece is equipped with SAFE ball elements, allowing the contact points to align themselves to the contour of the workpiece for stress-free clamping and a more accurate, finished part.

SINGLE CLAMPING BAR THREADED

- Black oxide finish provides corrosion resistance and extended life
- Threaded holes accommodate smooth or serrated, and fixed or adjustable ball elements, allowing for taller support heights
- Long slot for improved clamping range with less weight
- Accommodates ½"-13 or ⅝"-11 grid systems

Note: Custom sizes available upon request.

Note: CAD models available for download online.

**There are two different styles of clamping bar—standard wide nose, and narrow nose. For more information, please call +1.815.962.6076.*

Type	Nose Width	Dimensions			Thread	System	Part Number

A	Standard	0.66	6.56	3.06	½"-13	⅝"-11	AMF-87699-02

SINGLE CLAMPING BAR STRAP CLAMP

- Ideal for applications requiring additional support height
- Black oxide finish provides corrosion resistance and extended life
- Accommodate clamping requiring straps
- Long slot for improved clamping range with less weight
- Accommodates 1/2"-13 or 5/8"-11 grid systems

Note: Custom sizes available upon request.

Note: CAD models available for download online.

DUAL CLAMPING BAR BALL ELEMENT

TYPE A

Standard

Low Profile

TYPE B

T-SLOT CLAMPING BAR

- Black oxide finish provides corrosion resistance and extended life
- Heavy-duty design is suited for accommodating clamping applications for large workpieces
- T-slot is designed for adjustable positioning, direct mountability, and can accommodate ½"-13 ball elements
- Accommodates ½"-13 or ⅝"-11 grid systems

Note: Custom sizes available upon request.

Note: CAD models available for download online.

Dimensions			Part Number

28.00	2.00	4	AMF-31573

UNIVERSAL CLAMPING BAR

- Black oxide finish provides corrosion resistance and extended life
- Heavy-duty design is suited for accommodating clamping applications for large workpieces
- Threaded holes to accommodate smooth or serrated, and fixed or adjustable ball elements, allowing for taller support heights
- Capable of use as a non-precision single- or dual-clamping base
- Accommodates ½"-13 or ⅝"-11 grid systems

Note: Custom sizes available upon request.

Note: CAD models available for download online.

Dimensions	Thread	System	Part Number

SINGLE CLAMPING BAR HEEL REST THREADED HOLE

- Heavy-duty design is suited for accommodating clamping applications for large workpieces
- Black oxide finish provides corrosion resistance and extended life
- Threaded holes to accommodate smooth or serrated, and fixed or adjustable ball elements, allowing for taller support heights
- Capable of use as a non-precision single- or dual-clamping base
- Accommodates 1/2"-13 or 5/8"-11 grid systems

Note: Custom sizes available upon request.

Note: CAD models available for download online.

SINGLE CLAMPING BAR HEEL REST BALL ELEMENT

- Black oxide finish provides corrosion resistance and extended life
- Built-in ball element assemblies are ideal for smaller spaces due to their compact height
- Swiveling ball element contact pads allow for less internal stresses for bent or angled parts that require clamping for machining; ball elements swivel up to 6°
- Long life is provided by Viton O-Ring protection, preventing penetration of chips and coolant within the ball element system
- Smooth or serrated ball element contact pads available to meet different requirements
- Accommodates ½"-13 or ⅝"-11 grid systems

Note: CAD models available for download online.

Note: Custom sizes available upon request.

APPLICATION EXAMPLE

APPLICATION EXAMPLE

V-REST

- Hardened and ground for longer life and improved accuracy
- Face has threaded hole for convenient locating, clamping, or stopping
- Black oxide finish provides corrosion resistance and extended life
- Precision locating in a horizontal or vertical position with precision locating screw*
- Ideal for use with a chain, cable or long clamping bar
- Accommodates ½"-13 or ⅝"-11 grid systems

To determine height (H), use the following formula:
 $H \pm 0.001 = (.1547 \cdot D/2) - (.5774 \cdot A/2) + C$

Note: Custom sizes available upon request.

Note: CAD models available for download online.

SPLIT V-BLOCK SEPARATE, WITH HARDENED PADS

- Black oxide finish provides corrosion resistance and extended life
- Precision and adjustable mounting features to suit various setups
- Face has threaded hole for convenient locating, clamping, or stopping
- Supports diameters up to 120"—larger materials can be secured when used with consoles
- Accommodates ½"-13 or ⅝"-11 grid systems

*Note: Sold as a single unit—two units are needed to make up a full set.
Custom sizes available upon request.*

Note: CAD models available for download online.

LOCATORS, SPACERS, AND RISERS CALIBRATION BLOCK

- Standard size unit works on both horizontal and vertical machines
- Improves and simplifies probe calibrations
- Standardizes probe calibration and other checking procedures
- Useful in checking machine repeatability and directional stability after a crash or any major maintenance procedure
- Black oxide finish provides corrosion resistance and extended life
- Accommodates 1/2"-13 or 5/8"-11 grid systems

Note: Custom sizes available upon request.

LOCATORS, SPACERS, AND RISERS MINI WORK TOWER

- Black oxide finish provides corrosion resistance and extended life
- 1/2"-13 thru hole—1, 3, or 5 places depending on length
- Face has threaded hole for convenient locating, clamping, or stopping
- Doubles as a clamp when combined with threaded housings with ball elements (*page 159*)
- Accommodates 1/2"-13 or 5/8"-11 grid systems

Note: Custom sizes available upon request.

Note: CAD models available for download online.

LOCATORS, SPACERS, AND RISERS

HEAVY DUTY PRECISION LOCATOR

- Black oxide finish provides corrosion resistance and extended life
- ½"-13 thru hole—3 or 6 places depending on height
- Face has threaded holes for convenient locating, clamping, or stopping
- Doubles as a clamp when combined with threaded housings with ball elements (*Reference page 159*)
- Accommodates ½"-13 grid systems

Note: Custom sizes available upon request.

Note: CAD models available for download online.

LOCATORS, SPACERS, AND RISERS

UNIVERSAL LOCATOR BLOCK

- Black oxide finish provides corrosion resistance and extended life
- Hardened and ground for longer life and improved accuracy
- Face has threaded hole for convenient locating, clamping, or stopping
- Doubles as a clamp when combined with threaded housings with ball elements (*page 159*)
- Accommodates ½"-13 or ⅝"-11 grid systems

Note: Custom sizes available upon request.

Note: CAD models available for download online.

LOCATORS, SPACERS, AND RISERS RISER BLOCK

- Black oxide finish provides corrosion resistance and extended life
- Hardened and ground for longer life and improved accuracy
- Face has threaded hole for convenient locating, clamping, or stopping
- Doubles as a clamp when combined with threaded housings with ball elements (page 159)
- Accommodates ½"-13 or ⅝"-11 grid systems

Note: Stainless steel material and custom sizes available upon request.

Note: CAD models available for download online.

LOCATORS, SPACERS, AND RISERS SIDE MOUNTING BLOCK

- Black oxide finish provides corrosion resistance and extended life
- Hardened and ground for longer life and improved accuracy
- Ideal for clamping small parts horizontally for vertical mills and vice versa
- Face has threaded hole for convenient locating, clamping, or stopping
- Doubles as a clamp when combined with threaded housings with ball elements (page 159)
- Accommodates 1/2"-13 or 5/8"-11 grid systems

Note: Stainless steel material and custom sizes available upon request.

Note: CAD models available for download online.

LOCATORS, SPACERS, AND RISERS

PRECISION REST BUTTON

- Black oxide finish provides corrosion resistance and extended life
- Diameters are concentric within 0.0005"
- Can be used for supporting and side locating (use with precision screws when side locating)
- Accommodates ½"-13 or ⅝"-11 grid systems

Note: Custom sizes available upon request.

Note: CAD models available for download online.

LOCATORS, SPACERS, AND RISERS

PRECISION EDGE TOWER

- Black oxide finish provides corrosion resistance and extended life
- Precision counterbore and tapped holes are available on units 1.50" or taller
- Precision shaft threads into the precision counterbore for accurate transfer of location from grid plate
- All three diameters are concentric within 0.0005"
- May also be used for locating, side-locating, supporting, or stopping
- Accommodates ½"-13 grid systems

Note: Custom sizes available upon request.

Note: CAD models available for download online.

ADDITIONAL ACCESSORIES

- Spanner wrench; 1.00" version (AMF-59241-01)
- Replacement pin; 1.00" version (AMF-59242-01)
- Spanner wrench; 1.50" and 2.00" versions (AMF-59241)
- Replacement pin; 1.50" and 2.00" versions (AMF-59242)

SPRING SUPPORT SQUEEZE LOCK

- Black oxide finish provides corrosion resistance and extended life
- Built-in ball element assemblies are ideal for smaller spaces due to their compact height
- Swiveling ball element contact pads allow for less internal stresses for bent or angled parts that require clamping for machining; ball elements swivel up to 6°
- Long life is provided by Viton O-Ring protection, preventing penetration of chips and coolant within the ball element system
- Smooth, ball element contact pads available to meet different requirements
- Cap screw locks support at desired height
- Load Capacity: 1,000 lbs at 5 ft-lbs
- Accommodates ½"-13 grid systems

Note: Custom sizes available upon request.

Note: CAD models available for download online.

SAFE ACCESSORIES THREADED HOUSING, ADJUSTABLE

- Swiveling ball element contact pads allow for less internal stresses for bent or angled parts that require clamping for machining; ball elements swivel up to 6°
- Long life is provided by Viton O-Ring protection, preventing penetration of chips and coolant within the ball element system
- Smooth or serrated ball element contact pads available to meet different requirements
- Fixed, threaded housing available on page 159
- Accommodates ½"-13 or ⅝"-11 grid systems

Note: CAD models available for download online.

Note: Custom sizes available upon request.

SAFE ACCESSORIES PRESS-FIT SHANK

- Fixed height doubles for use in locating and positioning post pieces
- Swiveling ball element contact pads allow for less internal stresses for bent or angled parts that require clamping for machining; press-fit shanks swivel up to 10°
- Long life is provided by Viton O-Ring protection, preventing penetration of chips and coolant within the ball element system
- Ball element contact pads are available with smooth or serrated surfaces

Note: Custom sizes available upon request.

Note: CAD models available for download online.

STANDARD ACCESSORIES

PRECISION LOCATING SCREW

- Black oxide finish provides corrosion resistance and extended life
- Hardened to Rc 33-39 and ground for longer life and improved accuracy
- Mainly used to position and clamp components on grid bases
- Can also be used as a locator for fixture plates
- Accommodates ½"-13 or ⅝"-11 grid systems

Note: Custom sizes available upon request.

Note: CAD models available for download online.

STANDARD ACCESSORIES BUSHINGS

- Bushings are hardened to 60HRC
- ID is precision ground, and OD is concentric precision ground (.0001)
- Design allows for field replacements without reworking the bored hole
- Accommodates ½"-13 or ⅝"-11 grid systems

Note: Custom sizes available upon request.

Note: CAD models available for download online.

Dimensions			System	Part Number

STANDARD ACCESSORIES THREADED INSERTS

- Bushings are hardened to 60HRC
- Clear chromate coated to provide corrosion resistance and extended life
- High pull out strength
- Strong wear resistance threads
- Vibration resistance due to locking style inserts
- Design allows for field replacements without reworking the bored hole
- For ½"-13 or ⅝"-11 grid systems

Note: CAD models available for download online.

Note: Custom sizes available upon request.

⅝"-11	M20 x 1.5	AMF-87293
⅝"-11	M22 x 1.5	AMF-87788

STANDARD ACCESSORIES INSERT/BUSHING REPAIR KIT

Replacement kits for standard inserts and bushings are a must-have for every workholding department's toolkit. Providing the ability to prevent unexpected downtime keeps your production processes running smoothly and orders delivered on time.

Our repair kit includes the following:

- Extraction tool (x1)
- Insertion tool (x1)
- Bushings (x5)
- Threaded inserts (x5)

Note: Bushings and inserts provided in kit are standard OD and external thread. Custom sizes available upon request.

Note: CAD models available for download online.

Bushing ID	Part Number

PRACTICAL SOLUTIONS

UNIVERSAL ACCESSORIES BODY/ROTATING BODY ASSEMBLY

Self-Aligning Fixture Element *Page 158*

Ball element equipped with $\frac{1}{2}$ "-13 or $\frac{5}{8}$ "-11 threads, a smooth or serrated face, and fixed or adjustable design.

Universal Threaded Plug *Page 184*

66521— $\frac{1}{2}$ "-13 x 1"
66522— $\frac{1}{2}$ "-13 x 2"
66523— $\frac{1}{2}$ "-13 x 3"
66621— $\frac{5}{8}$ "-11 x 1"
66622— $\frac{5}{8}$ "-11 x 2"
66623— $\frac{5}{8}$ "-11 x 3"

Universal Body *Page 182*

66512—1"
66514—4"
66516—6"

Universal Connecting Rod *Page 187*

66640—2"

Universal Rotating Body *Page 183*

66540—2"

Universal Rotating Plug *Page 186*

66541— $\frac{1}{2}$ "-13
66641— $\frac{5}{8}$ "-11
66741— $\frac{3}{4}$ "-10
66141—1"-10

Universal Bottom Plug *Page 185*

66530— $\frac{1}{2}$ "-13
66630— $\frac{5}{8}$ "-11
66730— $\frac{3}{4}$ "-10
66130—1"-10

Note: Rotating plug is used only for AMF-66540 rotating body. Cannot be used with universal bodies.

UNIVERSAL ACCESSORIES BODY

- Provides heavy-duty support for large workpieces and fixtures
- Bodies can be joined together with universal connecting rods (page 187) to form taller supports
- Ball elements, v-blocks, and other accessories can be mounted with use of the universal threaded plug (page 184)
- ACME thread provides improved strength and longevity
- Black oxide finish provides corrosion resistance and extended life
- Mounts with universal bottom plug (page 185)

Note: Custom sizes available upon request. See body and rotating body assembly breakdown on page 181.

Note: CAD models available for download online.

Note: See body and rotating body assembly breakdown on page 181.

Dimensions		Part Number

6.00	2.0	AMF-66516

UNIVERSAL ACCESSORIES ROTATING BODY

- Provides heavy-duty support for large workpieces and fixtures
- Bodies can be joined together with universal connecting rods (page 187) to form taller supports
- Ball elements, v-blocks, and other accessories can be mounted with use of the universal threaded plug (page 184)
- ACME thread provides improved strength and longevity
- Black oxide finish provides corrosion resistance and extended life
- Mounts with universal bottom plug (page 185) or universal rotating plug (page 186)

Note: CAD models available for download online.

Note: Custom sizes available upon request. See body and rotating body assembly breakdown on page 181.

Note: See body and rotating body assembly breakdown on page 181.

Part Number
AMF-66540

UNIVERSAL ACCESSORIES THREADED PLUG

- Provides heavy-duty support for fixtures
- Mounts ball elements, v-blocks, and other accessories to universal bodies (page 182) and/or universal rotating bodies (page 183)
- ACME thread provides improved strength and longevity—ACME jam nut included
- Black oxide finish provides corrosion resistance and extended life

Note: Custom sizes available upon request.

Note: CAD models available for download online.

1.47	3/4"-10	AMF-66741
1.43	1"-8	AMF-66141

UNIVERSAL ACCESSORIES CONNECTING ROD

- Black oxide finish provides corrosion resistance and extended life
- Provides support for fixtures
- Used to join universal bodies (*page 182*), universal rotating bodies (*page 183*), or other universal support bodies
- ACME thread provides improved strength and longevity

Note: Custom sizes available upon request.

Note: CAD models available for download online.

Part Number
AMF-66640

Image: The Custom Fixturing Division of AMROK works with companies large and small alike—observing and learning about the issues at hand while working closely with engineers to provide the most innovative and cost-effective solutions. To learn more about the application shown in the image, please reference page 192.

CUSTOM MACHINING FIXTURES

INDUSTRIAL BURNER COMPONENTS

An industrial furnace company was looking to improve efficiency and cycle time by moving from manual, single-station machining operations to a multi-pallet machining operation for several of their production components.

PROBLEM

A series of burner component workpieces were being machined on single-station machines with increased handling and setup time.

SOLUTION

Custom, hydraulic fixturing solutions were designed with multiple operations implemented into each tombstone.

RESULTS

An increase in efficiency and decrease in scrap rate was reached by completing multiple parts per cycle—some setups finishing as many as four per cycle—with significantly less load, setup, and handling time.

OIL COOLER HOUSING

A foundry and finishing company required a fixturing solution for a new 500 pallet machine that could help meet the demands of increased volume requirements.

PROBLEM

The required fixture involved four operations that could complete three parts per cycle.

SOLUTION

A fixturing solution was designed to support one operation for each side of the tombstone, for a total of four operations. With some creative design, sixteen parts were able to be machined per cycle, completing a total of four per cycle rather than the requested three.

RESULTS

The customer experienced a significant increase in efficiency and throughput, as well as a decrease in load/unload times.

ENGINE HEAD

A machine tool company was looking for a solution that would reduce shipping costs for two different engine head designs for large earth-moving vehicles.

PROBLEM

Extra shipping costs were being incurred due to the excess slag and material left behind from the casting process.

SOLUTION

A universal fixturing solution was designed to fit both types of engine heads, and would run two different operations on each, supporting a six-sided machining operation.

RESULTS

The company was able to reduce shipping costs as requested. Added value included the ability to ship an almost completed part.

EARTH MOVING VEHICLE FRAME

A global-scale, earth-moving vehicle manufacturer needed a dedicated, manual fixturing solution to efficiently fasten a workpiece with loose tolerances for lineboring.

CHALLENGE

An earth moving vehicle frame needed a custom fixturing solution for a first-run machining process that had a challenging set of loose tolerances.

SOLUTION

A system of adjustable fixturing was developed to be used when loading the part, which was then accommodated by a set of fixed clamps that fastened the workpiece into place for machining.

RESULTS

The main benefits reported by the customer included improved ease of workpiece loading and unloading, as well as a decrease in scrap costs for this machining process.

FRONT SUPPORT FOR EARTH-MOVING VEHICLE

A foundry and finishing company had a challenging set of datums on a front support for a large earth-moving vehicle.

PROBLEM

In order to properly and accurately machine the part, it needed to be located from the inside—without this capability, the part needed to be run on single-operation processes.

SOLUTION

A set of bars with hardened, spherical rest buttons on their ends would extend by turning a knob. Once these bars are extended, the part is centered and located.

RESULTS

The application resulted in more efficient loading, setup, and unload times while also reaching better accuracy and precision in the machining process. The product was also able to be machined to an almost end-use product.

INVOLUTE

The AMROK fixturing division was challenged to improve the machining process for both left- and right-oriented workpieces being machined by Advanced Machine and Engineering's contracting division for a mining and mineral company.

PROBLEM

Every time this piece had to be machined, the fixturing had to be pieced together with a makeshift, single-angle tombstone. This process was not efficient, often delaying other jobs in the pipeline.

SOLUTION

A large, single angle tombstone was fabricated to fit both the left- and right-oriented pieces, with custom fixturing that could be adjusted accordingly to the required process.

RESULTS

The implementation of this fixture resulted in an estimated 80% increase in efficiency overall.

TOP COVER FOR EARTH-MOVING VEHICLE

A foundry and finishing plant required a dedicated fixture for a heavy, diamond-shaped part.

PROBLEM

The large, diamond-shaped part was a continuous challenge not only for loading/unloading, but also for locating the part for accurate machining.

SOLUTION

A series of eight ball-transfers were implemented to support up to 4000 pounds, making it significantly easier to adjust the workpiece accordingly prior to clamping down.

RESULTS

The load, setup, and unload time for the part was decreased and the customer was able to provide an end-use product to the customer, rather than a partially finished part.

HORSE COLLAR FOR EARTH-MOVING VEHICLE

A new horse collar casting workpiece needed a fixturing setup.

PROBLEM

The fixturing for this application needed to be universal in such a way that both a left- and right-oriented part could be machined on the same tombstone with some quick adjustments.

SOLUTION

With a pre-existing tombstone, a fixturing solution was designed to accommodate left- and right-oriented parts by simply moving a few fixturing components.

RESULTS

The product being machined was now able to ship to the customer as a completed product with lower setup times and improved throughput.

UNIVERSAL SETUP FOR AEROSPACE INDUSTRY

An international aerospace company was in need of a custom tombstone and fixturing setup to effectively and efficiently machine spars in different orientations.

PROBLEM

The original setup for these machining processes included clamping the workpiece using t-slots, limiting the flexibility of the setup.

SOLUTION

Combining numerous counsels, risers, and gridplates; the designed setup is adjustable in both width and height, while also allowing versatility for fixturing capabilities with the two inch universal grid pattern.

RESULTS

With the new setup, this company experienced an increase in flexibility and efficiency.

BOX TOMBSTONE

A manufacturer required a large, box-shaped tombstone with a specific grid pattern for a new application.

PROBLEM

The original designed fixturing solutions had cumbersome loading and unloading operations, and had reduced accessibility due to the traditional shape of the tombstone. The fixturing being used for specific workpieces also required a custom grid pattern for optimal clamping.

SOLUTION

A box tombstone was designed to be mounted to the machine table through the middle of the tombstone, making the walls of the tombstone closer to the door and more accessible. A standard grid pattern was also implemented in combination with a custom star-pattern to provide maximum flexibility.

RESULTS

The customer experienced improved accessibility to the workpieces, as well as a decrease in load/unload time.

CUSTOM TOMBSTONE

An international aerospace company installed new machines with bigger capacities.

PROBLEM

In order to effectively use the new machines, new tombstones and fixturing were required.

SOLUTION

The new tombstones required for this setup needed custom designs that integrated the standard two inch grid system, and fixturing was designed modularly.

RESULTS

Improved flexibility with the modular setup decreased teardown and setup times.

Image: Depth of selection is a large component to choosing a reliable tombstone and workholding solution provider. AMROK not only offers a large selection of products, but we also offer custom solutions for customers both large and small.

DOOSAN Lynx 220L with Bar Feeder
DOOSAN Lynx 300L

Multi-Axis Turning Centers
MAZAK INTEGRGX 400
MAZAK INTEGRGX 200
MAZAK MULTIPLEX 6100Y CNC Lathe

Complimentary Turning Equipment
LEBLOND REGAL 26" diameter x 72" 5¾" spindle head
VDF Heidenreich & Harbech 26" diameter x 96"
MAZAK 15" x 60"

Horizontal CNC Machining Centers
TOYODA FH800SX-i (2) 800mm x 800mm pallet pool envelope 59" x 59" 308 Tools
NIIGATA HN100D 119 Tools - Pallet changer - Heavy-duty box ways - High precision
NIIGATA HN80D 90 tools - Pallet changer - Heavy-duty box ways - High precision
MAZAK HCN 4000 14 pallet pool 120 tools
MAZAK H630 80 tools - Pallet changer 30" x 80"

Vertical CNC Machining Centers
MAZAK Nexus 510 2 pallet vertical M/C
MAZAK V-655 60 tools - Pallet changer 30" x 80"
MAZAK AJV 25-405 Tool and Pallet Changer
HAAS VF-2 20 tools 4th-axis rotary table

Horizontal Boring Mills with Index Tables
IKEGAI NB130P CNC Boring Mill
IKEGAI NB110T CNC Horizontal Boring Mill
DEVILIEG Jig Mill 4K-72 48" x 72" 2-axis NC control
DEVILIEG Jig Mill 4K-60 60" x 48" 2-axis NC control

FULL EQUIPMENT LIST

Grinding Equipment
Cylindrical Grinders
STUDER S40 Universal Cylindrical Grinder 60" Between Centers 14" Swing - High Resolution 0.0001° B-Axis with 2 Wheel Heads - C-Axis for Form and Thread Grinding
STUDER FAVORIT 533 1000mm Cylinder Grinder
MITSUBISHI CNC 13" x 42" Capacity

Grinding Equipment
Internal Grinders
Tripet TST 400 Grinding Center - Swivel range of each workhead is -5/+11° - Equipped with a 4-spindle turret head for internal and face grinding of diameters up to 15.75" (400mm) - Grinding lengths up to 9.85" (250mm)
VOUMARD 150 CNC ID Grinder - Three grinding heads - Grinding lengths up to 9.85" (250mm) - Maximum shaft lengths up to 59" (1500mm) 14" x 60" capacity
OKAMOTO IGM-15NCIII - Internal diameter to be ground: 0.24" ~ 6"/8" - Maximum grinding stroke: 5 - Swing over table: 24"
HEALD Slide Head 15" x 15"
SUNNEN Eclipse EC-3500 - Automatic precision honing machine 3.50" diameter maximum bore
SUNNEN Precision Home
HENNINGER Oscillating Spindle Center Hold Grinding Machine
EX-CELL-O #74 Center Lap

Grinding Equipment
Rotary Grinders
MATTISION 42" 48" diameter with angular adjustable head

Grinding Equipment
Surface Grinders
DANOBAT 40" x 100"
OKAMOTO 10" x 24"
DOALL Automatic 10" x 24"
KENT Automatic 8" x 18" capacity

EDM Machines
MITSUBISHI CNC EDM Wire Cutting Machine 31.49" x 22.63" x 8.46" maximum workpiece dimensions

Sawing Machines
AMSAW 350PR with Handling System 5" - 14" capacity
AMSAW 100 with Handling System Up to 4¼" capacity
AMSAW 400 Automatic Bandsaw 16" capacity
DOALL V-36 Vertical Contour Saw 9" x 36"

Miscellaneous Machines
KUHN Type F Hydraulic Straightening Machine 70 Ton x 24' capacity for flats and rounds

Inspection Equipment
DEA Model 3408 CNC Coordinate Measuring Machine 200" x 80" x 54" with PC-DMIS
DEA Model 1204 CNC Coordinate Measuring Machine 72" x 38" x 54" with PC-DMIS
BROWN & SHARPE Coordinate Measuring Machine 16¼" x 14" x 12"
BROWN & SHARPE Electronic Digital Height Gauge
J&L Optical Comparator
WILSON Rockwell Tester
